

Alzheimer's Risk Tests now available

New test to predict risk of cognitive decline due to AD launching at A4M anti-aging conference

The new **IBX Alzheimer's Risk Test**, powered by Cyttox's *genoSCORE*™ technology, is having its conference debut at the American Academy of Anti Aging Medicine (A4M) **Annual World Congress** in Las Vegas from December 9-12. The test, for physician use only, can identify individuals most at risk of cognitive decline due to Alzheimer's disease, decades before any symptoms arise, and from just a simple saliva sample.

Delegates attending the conference should visit the Cyttox booth (9036) and register to use the product to receive a 20% conference special discount on the list price.

For physicians in the US and Canada not attending the conference, you can still register for the product at: www.alzheimers-risk-test.com or if you are interested in hearing more about the test or joining a webinar, please contact: alzheimers@vanguardpharma.com

Physicians in Europe can visit the European web portal at: www.genoscore-lab.com to register for the product, learn more about the test, or contact support@cytoxgroup.com to join a webinar.

Watch our latest videos on the clinical application of polygenic risk scoring to support management of individuals with early cognitive concerns

Given the mounting evidence that lifestyle interventions and behavioural changes play a significant role in maintaining cognition and function, as well as preventing or delaying the onset of dementia, we have developed a series of discussions, and white paper about the clinical use of polygenic risk scoring, and our *genoSCORE*-powered tests.

To view the videos, and executive summary of the white paper, please click [here](#). A focal point of these discussions is around the actions that individuals can take to reduce their risks of Alzheimer's disease, covered in The Lancet Commission – Dementia prevention, intervention, and care. Click [here](#) to access the paper.
